High-quality stainless steel which provides a silver king shine, non-toxic, rust resistance and guarantees total hygienic safety.

Metal doors are made with real steel alloys such as brass, Stainless-steel, Nickel and Copper. Each panel is made from a sheet of steel that has been press-folded on the edges. It is then plated onto white hydro melamine chipboard support. Thanks to infusible electrode welding Process, the corners are smoothly welded providing high-quality finished panels.
